

Inspecting Fire Protection Valves

Skill Level

Basic

Course Description

Without a valve inspection program, you can never be sure your fire protection system will work when needed. Inspecting Fire Protection Valves is a free, interactive tutorial available exclusively to FM Global clients that instructs on how to properly inspect fire protection valves. The course takes less than one hour to complete.

Target Audience

- Personnel responsible for conducting valve inspections, facility managers and other personnel responsible for protecting their locations

Upon completion of this course, you should be able to understand:

- The hazards associated with an improper or incorrect valve inspection program
- Key components of an effective valve inspection program
- How various types of valves function
- How to properly inspect various types of valves
- Additional resources that can be used to learn more about valve inspection
